

# iOS UX SDK 4.12 Release Notes

## Release Date

---

2020.05.07

## Highlights

---

- Support for Matrice 300 RTK.
- Bug fixes.
- **Important notice about upcoming changes:** We will be releasing a new, open-source version of the UXSDK and deprecating the current closed source version this year. In addition, we will be releasing a new open source beta shortly after 4.12. The iOS UX SDK version 5 beta 2 will be open source and available in [iOS UX SDK Beta](#) and Android UX SDK version 5 beta 3 in [Android UX SDK Beta](#).

## Supported iOS Mobile SDK

---

- DJI iOS Mobile SDK v4.12: download at <https://developer.dji.com/user/beta-sdk/mobile/>.

## iOS Compatibility

---

UX SDK is compatible with iOS 10.0 and above.

## Bug Fixes:

---

- **FPV Widget stream may freeze with a Z30 when used as a secondary feed:** Fixed.\
- **Camera Capture Widget does not take panoramas:** Fixed.
- **FPV grid lines are not properly aligned:** Fixed.
- **Record Video Widget breaks when the camera settings are opened:** Fixed.
- **Vision Widget does not show disabled state for Mavic 2 Enterprise Dual:** Fixed.
- **Map Widget polygon zones may not support the tap to unlock feature in the map widget:** Fixed.
- **Exposure settings' underexposed label does not go away:** Fixed.

## Known Issues

---

- **Radar Widget does not support Matrice 300 RTK.**
- **Video Signal Widget does not update correctly when connected to a Matrice 300 RTK.** The Vision Widget of iOS UX SDK version 5 beta 2 fully supports this feature.

- **Pre-Flight Checklist Panel's RC signal shows 0% when connected to a Matrice 300 RTK.**
- **[OLD]Distortion Calibration:** Distortion calibration is currently not supported in UXSDK. Support will be added in a future release.
- **[OLD]Mavic 2 Remote Control:** The Mavic 2 series (Mavic 2 Pro, Mavic 2 Zoom, and Mavic 2 Enterprise) allows developers to customize the behavior of the photo and video buttons on the RC. UXSDK does not currently give these buttons a default behavior. Using the buttons to take a picture or video using the RC while connected to UXSDK will not work by default. The developer must assign a behavior for them to work.
- **[OLD]M210 RTK Panel:** The M210 RTK panel may not come up when the GPS signal widget is tapped when on M210 RTK. As a workaround, call `setRTKEnabled:` in `DJIRTK`. Upon success, tapping on the GPS signal widget should then display the RTK panel.

## Bug Fixes

---

- **Camera Settings Shoot Photo Mode:** On products that support panorama shoot photo mode, the camera settings shoot photo mode menu may display incorrect or partially missing settings options. This issue only occurs on iPhones.
- **XT2 Camera Settings:** When using the XT2 camera, the camera settings menu may not accurately reflect and control XT2 settings.
- **Inspire 2 SSD Mode:** When Inspire 2 SSD mode is enabled, the camera settings video resolution and frame rate panel may not accurately reflect the resolution and frame rate of the aircraft.

## Known Issues

---

- **Mavic 2 Remote Control:** The Mavic 2 series (Mavic 2 Pro, Mavic 2 Zoom and Mavic 2 Enterprise) allows developers to customize the behaviour of the photo and video buttons on the RC. UXSDK does not currently give these buttons a default behaviour due to which clicking a picture or taking a video using the RC while connected to UXSDK will not work by default if the developer does not assign a behaviour to it.
- **Distortion Calibration:** Distortion calibration is currently not supported in UXSDK. Support will be added in a future release.

## Bug Fixes

---

- **New DUX prefix:** If upgrading from 4.4, all class names will need to be renamed to match the new DUX prefix.
- **Better multiple camera support:** Support for dual-gimbal M210 has been improved inside the default layout.

## Known Issues

---

- **Camera Settings Shoot Photo Mode:** On products that support panorama shoot photo mode, the camera settings shoot photo mode menu may display incorrect or partially missing settings options. This issue only occurs on iPhones.
- **XT2 Camera Settings:** When using the XT2 camera, the camera settings menu may not accurately reflect and control XT2 settings.
- **Mavic 2 Remote Control:** The Mavic 2 series (Mavic 2 Pro, Mavic 2 Zoom and Mavic 2 Enterprise) allows developers to customize the behaviour of the photo and video buttons on the RC. UXSDK does not currently give these buttons a default behaviour due to which clicking a picture or taking a video using the RC while connected to UXSDK will not work by default if the developer does not assign a behaviour to it.

- **Distortion Calibration:** Distortion calibration is currently not supported in UXSDK. Support will be added in a future release.
- **Inspire 2 SSD Mode:** When Inspire 2 SSD mode is enabled, the camera settings video resolution and frame rate panel may not accurately reflect the resolution and frame rate of the aircraft.
